# Got EMS?

**Enterprise Management Software (EMS)** plays a vital role in the performance and intelligence of any organization.

Integrating and consolidating business application software and hardware into one unified system makes sense. Imagine having all departments

information in one data warehouse, while harnessing the latest technology to streamline your business processes and analyze performance. EMS gives your company a compelling advantage over your competition with:

- ◇ Improved productivity and workflow
- ◇ Quicker customer response
- ◇ Reduced inventories and lead times
- ◇ Faster order entry and processing
- ◇ Maximized cash flows and profits
- ◇ Improved business intelligence and decision response time
- ◇ eBusiness and value chain collaboration

Sound expensive to implement? It's not. Whether you're in manufacturing, wholesale distribution or retail/Point-Of-Sale, now is the time to transform your business technology to meet the demands of the 21<sup>st</sup> century and beyond.

## Who We Are - Assignment 400 Group

An IBM® Business Partner and one of the early Software Service Organization's (SSO) to be appointed by IBM, Assignment 400 Group (A4G) is a leading provider of business enterprise management software; hardware; barcoding, scanning and POS systems; and technical service solutions nationwide.
